# General Description

The quality of the Soil in this Township is very inferior being below the common average unfit for cultivation. Surface generally pretty rolling. Lumbered with Black Norway and White Pine. There is quite a number of Lakes with one very large Lake in the North West part. There is a very good sized stream coming in to the Lake from the North West but without any outlet. The water in these Lakes are clear and pure. The Crow-Wing river has a good heavy current with good high Banks. There are a good wagon road called the White Earth and Leech Lake Road.
